

Lithium battery Powered Forklift Truck **SBF-Li** Series

Note: the data displayed are all based on the model SBF30-Li, and data for other trucks are shown in the table of technical parameters.

Note: The vertical axis stands for load capacity and the horizontal axis stand for load center which is calculated from the front surface of the forks to the gravity of the standard load. the standard load means a cubic with 1000mm edge length, when mast is tilted forward, using non-standard forks or loading large goods, the load capacity will be reduced. The load capacity of standard mast at different load center can be known from this load chart.
